

STOBAG

VIVO

The unique awning line for the highest quality of outdoor living.

EXPERIENCE SIMPLICITY AND COMFORT
WHEREVER YOU DESIRE SHADE.

Extend your living room outside and enjoy precious moments.

The requirements for shading vary widely, encompassing both design and comfort. That's why VIVO offers many options for an individual solution. From very small to very large areas, VIVO can be adapted to the dimensions of your patio or balcony.

The VIVO design is compact, timeless and harmonious. Every detail has been carefully thought through – from the linear surfaces to the optimal integration of all elements. With VIVO, you can set design accents in harmony with your building. To customize your awning to your wishes, you have a wide range of options for functionality, fabric colors, and patterns available.

VIVO awnings are a long-lasting companion. Because needs change over time, we have designed VIVO to be modular and expandable, making it ready for future innovations. With VIVO, you are not only investing in comfort and protection, but also in the value of your living space.

TIMELESS AND HIGH QUALITY

Experience modern technology perfectly integrated in a compact design. All elements radiate a special stability and dynamism thanks to their clear lines. The surfaces impress with their high-quality finish.

ROBUST AND DURABLE

The robust construction with forged components stands for resilience and precision. The GORE® Tenara sewing thread gives our fabrics extreme durability.

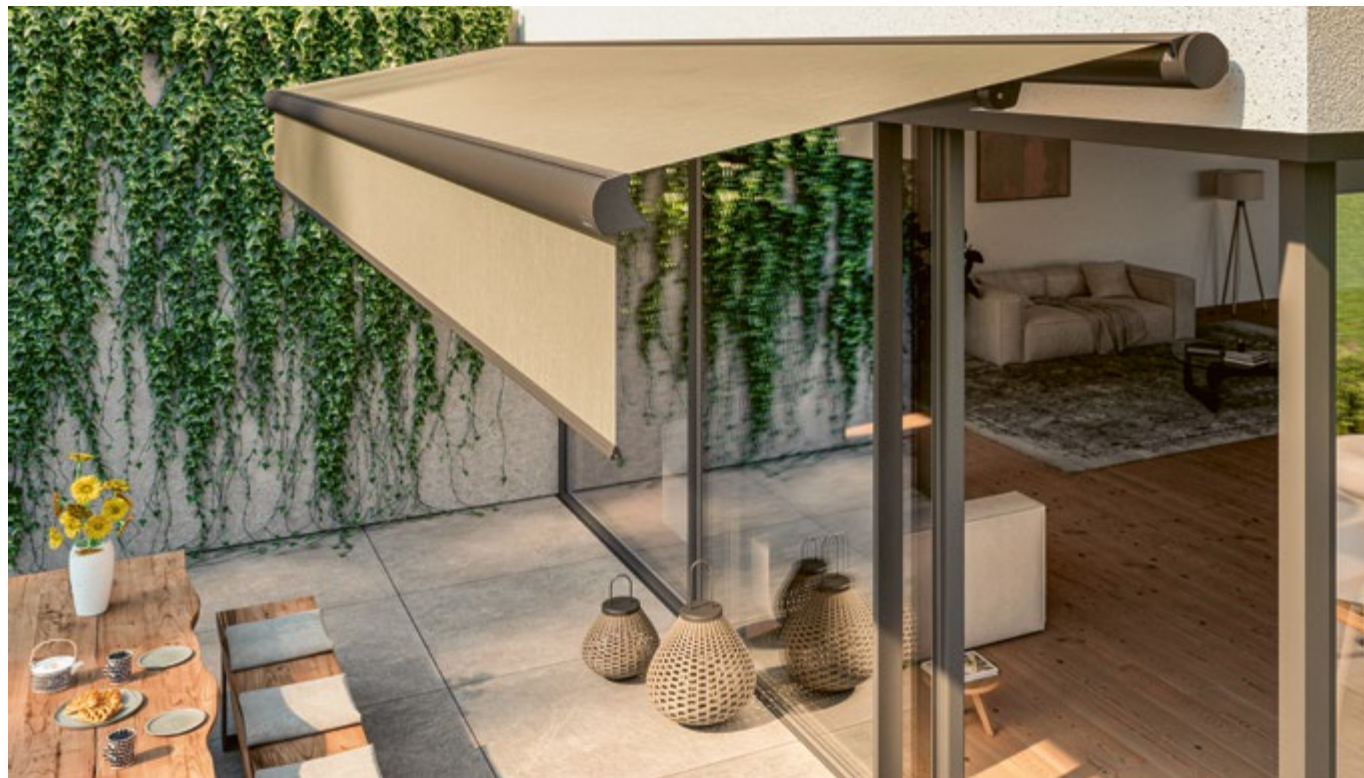

INDIVIDUAL AND VERSATILE

Decide on the design and functions of your awning. Technology of arms, front profiles, color and structure of fabric and surface – you can put together your awning according to your wishes.

FLEXIBLE AND EXPANDABLE

VIVO can easily be extended at a later date. The modular design enables the integration of additional functions such as a lowerable valance or automated control and thus integration into any smart home.

VIVO IS SUITABLE FOR EVERY BUILDING REQUIREMENT.

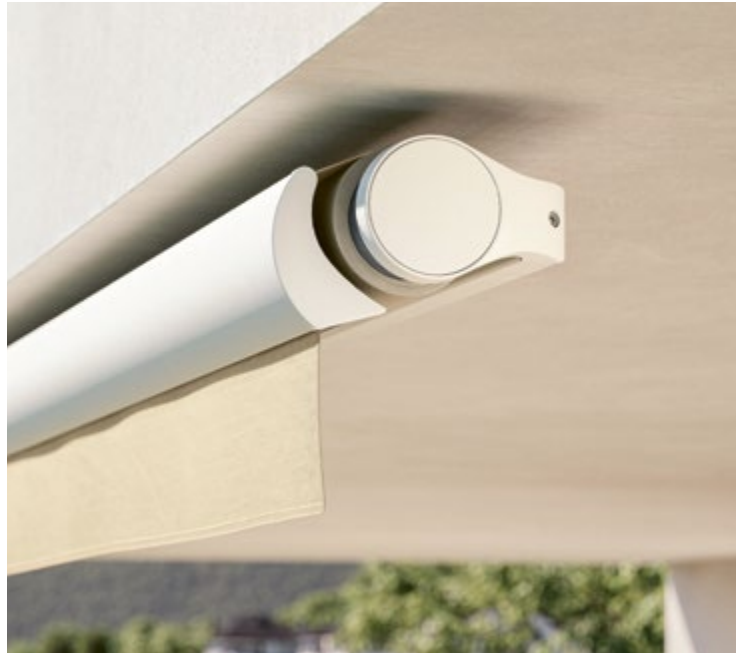

With VIVO, you enjoy premium sun protection on your patio, garden seating area, balcony or loggia. The width is freely selectable between two and seven meters with a projection of up to four meters.

We attach great importance to quality and versatility in order to provide you with the optimum shade. Even in light rain or wind, you will remain protected in a first-class manner, when applied correctly.

APPLICATION AREA

Loggia and balcony

- The small side covers of the slim S6600 model are ideal for small fabric surfaces with a projection of up to 3 m pojection, offered with a manual crank mechanism.
- Direct installation under the ceiling or to rafters allows for a clear view of the outdoors.
- The additional glare protection provided by a front volant fabric allows the degree of inclination to be kept lower.

Garden patios and terraces

- The large side covers of the compact model S6800 are ideal for canopies with a projection of over 3 m and for the cover board.
- An optional cover board or an enclosing protective sleeve offers a durable fabric quality.
- With a freely selectable area of between 3 m² and 28 m², VIVO can also be used to shade very large areas.

ARM TECHNOLOGY

Classic articulated arms*

- The robustly constructed technology ensures long-lasting stability.
- The proven arm concept harmoniously integrates spring tensioning elements into the overall design.

Special solution*

- Cross-mounted articulated arms offer a larger projection with a smaller width for special building situations.

*Available to order in the second half of 2024

Trilliant telescopic arms

- The patent-pending technology, in combination with the “Back Impulse” process, creates an attractive fabric tension in any position.
- The unique cross-section provides maximum stability whilst maintaining a slim look.
- Only 2 arms are required for all sizes up to 7×4 m.

THE UNIQUE TELESCOPIC DESIGN
IS THE PERFECT COMPLEMENT FOR
HIGH-QUALITY ARCHITECTURE.

WEATHER PROTECTION

Cover board

- The cover board protects the fabric against the weather and deposits from plants and animals.
- The integrated rubber lip on the wall prevents dirt from running off.

Protective sleeve Protect

- The protective sleeve shields the fabric from weather, environmental debris, and fading on all sides.
- Internal drainage channels drain rolled-in rainwater to the outside.

We recommend always rolling up the fabric dry to maintain the quality of the cloth.

FRONT BAR

Standard front bar

- The design is particularly slim with guaranteed stability.

Reinforced front bar

- The integrated drainage channel directs light rain away from the seating area to the outside.
- This bar is integrated as standard with telescopic arms, otherwise selectable.

Strongest front bar

- The integrated drainage channel directs light rain away from the seating area to the outside.
- This bar provides space for lowerable Volant-Plus.
- The inner drainage channel can divert short-term bursts of rainwater outside.

SUN PROTECTION

Lowerable Volant-Plus

- This option allows for minimal tilt of the awning and thus maximum clearance.
- The Volant-Plus is a flexibly adjustable protection against low glaring sunlight, light wind and serves to maintain privacy.
- With a translucent Soltis fabric up to 160 cm high, you can enjoy a clear view with minimal visibility from the outside.
- The acrylic fabric, designed identically to the opaque main fabric, conveys a sense of security.

Volant

- For additional glare protection when the sun is low.
- The lower degree of inclination provides a better view and more space.
- Conceals the view of the construction.

AWNING FABRIC AND FRAME COLOR

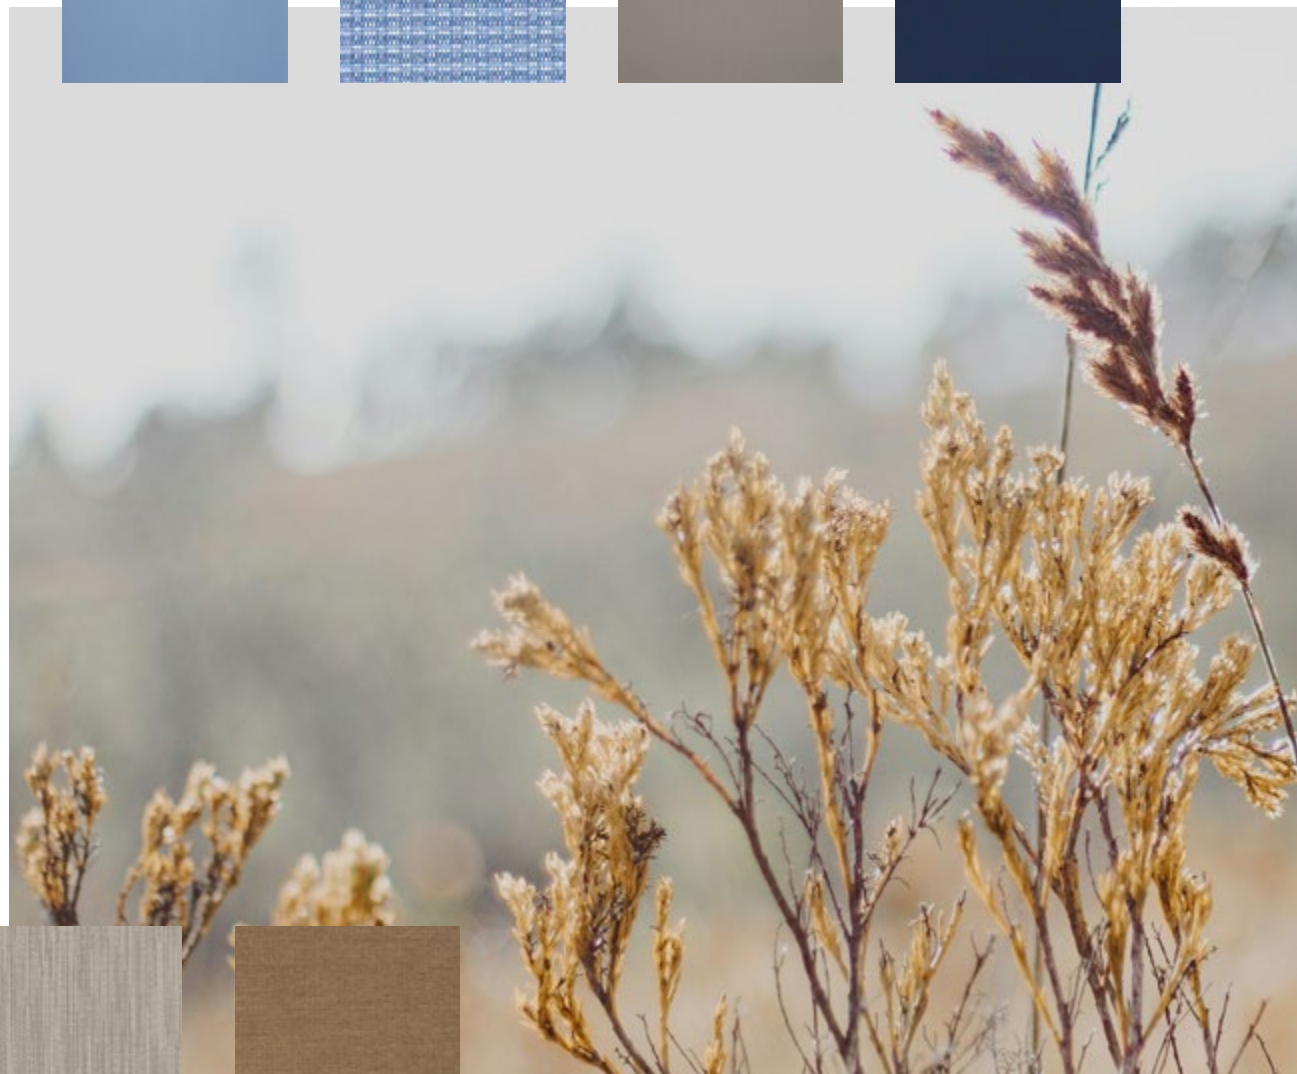

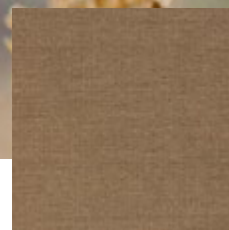

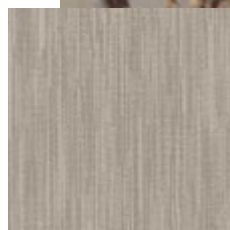

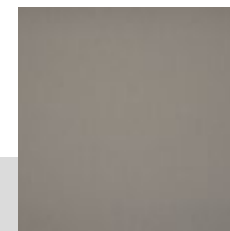

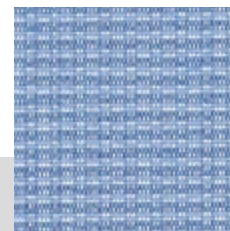

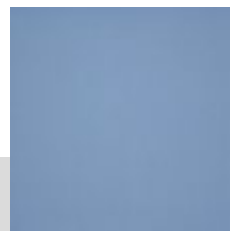

We invite you to discover the diversity of our fabric collection, which not only follows the latest color trends, but also integrates innovative technologies and sustainable materials.

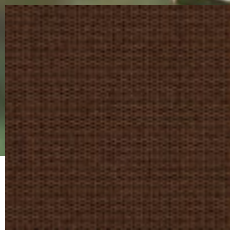

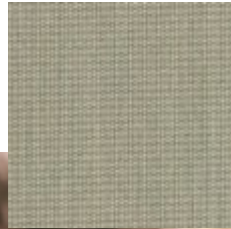

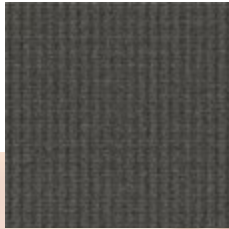

With a fabric from the STOBAG Collection, you are opting for European high-tech textiles in premium quality.

The diverse color palette allows you to harmoniously match the fabric to the frame and the surroundings.

Discover innovative new fabrics:

- With its texture, the acrylic Brilliant Leaf fabric imitates the spirited color spectra of nature and received the Red Dot Design Award 2024.
- The Soltis Lounge 96 fabric with its micro-perforated material is translucent, provides sun protection and allows air to circulate. With these properties, you can enjoy light and space on your balcony or terrace.
- The OEKO WEAVE fabric gives over 30% RE-USE fibers a second chance and is certified to Class 2 of the OEKO-TEX Standard 100 for effective sustainability.

Find your favorites with our fabric finder. We will be happy to send you samples to your home or let one of our specialist partners advise you personally in your area or at your home.
