

OMBRAMOBIL OS4000

Free-standing double-sided folding-arm awning with crank drive. Tensioning by awning cover. Extension and retraction of the awning by detachable crank and bevel gearbox. Crank made of metal with a hook and plastic-covered grip. The external surface is powder-coated to match standard colours. The full-length, rounded top box in extruded aluminium profile supports the construction and also protects the arms and cover against the weather. The side elements are cast aluminium alloy and fitted with fixing points to take the cover, gearbox and folding arms. A connecting profile is fitted to the outside of each side element. The cast aluminium alloy side caps close off the top box. The awning is tensioned by a roller tube. The roller tube contains an auxiliary spring to make rolling the cover easy. The folding arms are made of extruded aluminium profiles with cast aluminium precision joints. Tensioning springs and double stainless steel cables are built into the arms. The middle joint is fitted with a cable protection. The incline can be adjusted from 10° up to 20° by the swivelling section of the folding arms. The front edge of the awning is formed by the front rail of extruded aluminium chamber profile with fitted plastic end caps. The front rail also has a rain gutter and grooves for the cover and valance. The Ssupports are connected to the awning by a connecting profile. The aluminium supports are rounded and measure 82 x 50 mm. Transverse feet are used for floor-mounting, made up of connector and foot plates of cast aluminium alloy. As a variation, the awning can also be installed with floor sleeves.

Options**Electric drive**

AC motor 230 V / 50 Hz or with friction brake, electronic end stop switch and thermo-protection. IP54 (spray water) protection with 50 – 150 cm 4-pole connection.
